I am excited to introduce to you my latest addition to the Visual Studio Code extension family - **Misty Blue**. Misty Blue is a user-friendly and colorful dark theme that will change the way you code forever. The theme is designed to be easy on the eyes, making it possible for you to code for longer periods without straining your eyes.

Misty Blue is not just a theme for developers but for everyone. Every color has a semantic and is very useful for non-technical users to understand the code. Whether you are a seasoned developer or just starting out, this theme will make your coding experience more enjoyable and productive.

With Misty Blue, every aspect of the code, including variables, properties, keywords, numbers, classes, constants, functions, strings, operators, and comments, has a different color, making it easier to differentiate and understand the code. Over time, you'll get habituated with the color codes, and you'll be able to tell at a glance what each color represents. This makes the code readable for everyone and saves time that would have been spent trying to understand the code.

I highly encourage you to try Misty Blue and rate it on the Visual Studio marketplace. Your feedback and support will help me continue to make improvements to the theme and make coding a more enjoyable experience for everyone.
